Ruzomberok Mill, Slovakia

ROLL HANDLING Systems

Throughout its existence, Saimatec has focused on Roll Wrapping Systems. During the past few years, introduction of complete Roll Handling Systems into the company's product range has been a consistent add-on to this development.

Today Saimatec product range includes a complete set of equipment for roll conveying from winders to wrapping line and further to warehouse. Equipment range includes, for example:

- Slat conveyors, various alternatives
- Kickers and receivers
- Lifting and lowering scoops

- Rolling ramps with intermediate stoppers and cradle stoppers
- Turntables and turning conveyors
- Upenders
- Vertical conveyors
- Warehouse equipment such as sorting ramps and label orientation

Roll Handling Systems are seamlessly interfaced with other systems such as winders, warehouse systems and existing roll handling or roll wrapping systems. Roll Tracking and Roll Data Management functions are an integral part of the system.

The combination of Saimatec Roll Wrapping and Roll Handling Systems is an optimal solution for a modern Paper Mill's finishing room.
